

Embed your brand store in any Notion page

A Notion connect block that embeds a live, browsable brand store — so internal team merch lives next to your team handbook, not in a separate tab.

WHO WE ARE

Swag Dimension is the modern, multi-tenant SaaS platform for organizations that want to run permanent brand-ed-merch stores without inventory, minimums, or third-party storefront management. Our customers include nonprofits, schools, real-estate brokerages, churches, fitness studios, and corporate HR teams across the US.

What the Notion integration unlocks

Team handbook embed

Drop your team's swag store inside the onboarding section of your handbook so new hires can grab gear during day-one orientation.

Sub-brand pages

Each engineering org or product line gets a Notion page with its own embedded store. Same parent brand, different sub-collections.

Brand-kit sync

When you update logos, colors, or fonts in your Notion brand kit DB, your Swag Dimension store reflects it on the next mockup render.

Mutual value

FOR NOTION

FOR SWAG DIMENSION

A high-leverage integration that unlocks new use cases for Notion users — turning organizational customers into multi-product power users. Every Swag Dimension brand store becomes another reason for Notion's users to stay engaged daily.

Native distribution to Notion's existing customer base, who are already paying for tools that orchestrate work — and now have a turnkey way to run a branded-merch program inside their existing workflow. Reduces our acquisition cost and increases activation speed.

Let's talk integration

We have engineering and partnerships resources ready to ship this integration. Looking for a co-marketing partner on the Notion side to validate the use cases and unlock joint distribution.
